# AIRCAST

**HOW TO ADD ADDITIONAL TAGS TO YOUR MP3 FILES IN THE DATABASE.**

**QUESTION**
A customer wants to look for specific songs, Aircast looks for  the tagfile of a MP3 file.
 Then the customer gets Artist, Title en Duration, but... asks if it is  possible to also get year, genre, language etc. actually more tags linked to the  mp3 file.

**ANSWER**
 The most common tags (including album, year, genre, ...) should be imported if an ID3v2 tag is present.
You can check that in the item properties dialog, "Attributes" tab.
To add them as additional columns in the DB library, go to Administration -> Configuration inside the DB app, and register those fields as "Standard Attributes", then restart.
