

How to view back broadcasting history

Question:

I meant how to see the log of the Playing out history , what time the system playing what file, what content? It is like a run-down logging for broadcasting process?

Answer:

There is a variety of logging facilities available, in any format you like, e.g. into a file, SQL database, as HTTP post calls to a web server etc...

Check the options in the configuration app under "Logging". E.g. add a new logging facility of type "File", enter the filename (you can use variables for year/month/day/... to have a new log file each day), and then set the appropriate format using the variables from the manual, e.g. "%a - %b" for "artist - title".

If you intend to make an online playlist on the website, I usually propose a solution involving HTTP calls and an SQL server on the website:

https://www.mairlist.com/dokuwiki/tutorials:other:online_playlist_on_your_website_with_php_mysql

The database (AIRCAST DB) does keep an internal log of all items that were broadcasted; currently that information is only displayed per-item on the "History" tab in the item properties. I shall add a new "History" tab to the database app where you can review the entire playback history of a particular day.
