More SQL server questions/answers

Question:
Please advise us recommend SQL server edition for working with our Aircast?
I having now SQL Server 2008 Enterprise and creat database as your advise but when connect, It is failed.

Answer:
The "table config not found" message just means that the table structure (schema) hasn't been set up yet.
They just go to the "Setup" tab and create the schema.

Question:
The SQL data format for attached to a SQL server usually includes 2 files: xxxx.mdf and xxxx.ldf.

From these files we can attached them to our SQL server (a networked server running SQL server for central Database management).
Then our Playout clients by AIRCAST may connect over network to this SQL server for Database Lib access.

Answer:
These mdf/ldf files are used to create the initial tables.
He doesn't need the files, because the table creation task is built right into AIRCAST.
Create a new, empty database in MSSQL.
Then go to configuration, add a new database of type "AIRCASTDB (Microsoft SQL Server)", enter host, database, user and password, then go to the Setup tab and click the button that creates the table.
