## Airlite cannot "hear" or play any audio from Aircast

Dear Support,

I have installed Aircast Software and Airlite Control Software.

I have installed a list of songs and station ID's into the Aircast software and played them.

I have installed the USB cable between the Airlite and the Windows computer.

However, I am not able to get the Airlite to "hear" or play any audio from the Aircast.

I have confirmed that the ports are configured correctly between the board and the software.

- I guess you mean the UDP ports which you can configure in Airlite Control when you mention 'I have confirmed that the ports are configured correctly'.
- These ports are for communication only and have nothing to do with the Audio part!
- Please make sure you have correctly setup the audio devices in Aircast.
- In Aircast you can assign individual audio devices to Player A, B, Cartwall, etc.
- HOW?
- Go to: Control Panel -> Audio Devices.

AIRC	AST	•	
	Contr	rol Panel	Ctrl+Alt+X
_	Syste	m Log	
	Remo	ote Control Console	
	Gene	rate Bug Report	
	Abou	t D&R AIRCAST	

Select the appropriate audio devices for your Players / Cartwall(s).
