

How to record AIR input signal

QUESTION:

Hello we are using the Airlite USB Mixer.

Is there any possibility to record the Air Input Signal over one of the USB Soundcards of the Airlite?

We now record the Aircheck over one of the Soundcards of the Airlite but we can't get the processed signal of the Optimod wich go's to the air input.

ANSWER:

Yes this is possible. The Airlite sends 4x USB audio streams to the PC. These four streams contain the following signals:

**** From Airlite To PC: ****

USB1: Program buss

USB2: Aux buss

USB3: Voicetrack (VT-buss)

USB4: Air (analog input Air-in is directly routed to this output)

All this can be found in the manual and block diagram:
